## Overview

The instructor is Mr. Reaser, M.S. C.S., Teaching Instructor for LCSEE. You can contact him by email at ron.reaser@mail.wvu.edu, by Slack chat at reaser.slack.com, or as listed on his website at reaser.org. His office is AER 251. You can schedule an office or online meeting at calendly.com/reaser or meet by walk-in as available in his office or campus common areas.

The lecture section 1 has CRN 80413 and meets TR 2:00 pm to 3:15 pm in EVC 414.

The lab section 2 with Branson Beach (GTA) has CRN 80414 and meets F 2:00 pm to 4:50 pm in AER 137.

The lab section 3 with Branson Beach (GTA) has CRN 80417 and meets M 6:00 pm to 8:50 pm in AER 137.

The following learning outcomes for the course are met by lectures and assessments during the semester. The calendar provided with this syllabus on eCampus details the lecture and assessment schedule to meet these outcomes.

Upon successful completion of this course (with around 30 days of fall lecture), students will be able to...

1. Write programs using Java source code at an intermediate level (cumulative).
2. Employ recursion and analysis of algorithms to design efficient solutions to nontrivial problems (4 days).
3. Employ software engineering principles to develop abstract data types (5 days).
4. Employ data structures including lists (3 days), stacks (2), queues (3), priority queues (3), sets (3), binary search trees (5), and heaps (2) with dynamic memory allocation.
5. Employ object-oriented programming techniques including generic types, iterators, cascade calls, interfaces, inheritance, polymorphism, and encapsulation (cumulative).
6. Appraise data structures and algorithms using mathematical abstraction and critical thinking skills (cumulative).

The optional text is Data Structures and Abstractions with Java 5th Edition by Carrano and Henry (ISBN 978-0134831695) for study and reference. There are no assigned readings.

All software and accounts for the course are free for use on personal computers or are available in campus labs. Not having a usable computer, correct software configuration, reliable internet connection, or access to the labs do not excuse you from course requirements. Other software requirements are announced as needed and the resources are posted in eCampus.

## Grading

The first table shows the assessments you are graded on and the points each is worth. The second table shows the minimum cumulative points to earn for a given final grade for the course. Some opportunities for bonus points are announced during the semester. You are capped at 50 cumulative bonus points.

<table>
<thead>
<tr>
<th>Assessment</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quizzes (8 × 50 each)</td>
<td>400</td>
</tr>
<tr>
<td>Projects (3 × 100 each)</td>
<td>300</td>

<td>D</td>
<td>Unsatisfactory 600</td>
</tr>
<tr>
<td>F</td>
<td>Failing 0</td>
</tr>
</tbody>
</table>

There are 10 quizzes given. You earn up to 50 points each based on your performance. The dates of quizzes are unannounced and you are given a grade of 0 points for any you miss. Your 2 lowest quiz grades are automatically dropped at the end of the semester. The 8 remaining grades total 400 points.

There are 3 projects given. The instructor releases a requirements document for each project. Any late work submitted for a project is penalized 25 points per day late (rounded up), not to exceed the day of the final session.

The lab component for the course is apportioned by the lab instructor and is detailed in the lab syllabus.

There are no make-ups or extensions under any circumstances except by permission at the discretion of the instructor.

Your grades are posted in eCampus in a timely fashion. Students interested in approximating or predicting their final grades are expected to perform their own calculations. Graded out-of-class assessments and hand-written quizzes will be returned as appropriate in a timely fashion, but fill-in-the-bubble quizzes will not be returned due to logistical constraints.
**Course Policies**

Regular attendance is important but is not required. You are responsible for any work you miss due to absence.

Your deliverables must be submitted in the expected formats by the given due dates, and any late work may be rejected without a grade except when a policy indicates otherwise. You should keep secure copies of your work in case of data loss.

Ensure that your conduct in this course is appropriate. Be attentive to the instructor and work only on assigned material. Do not arrive late or leave early without notice. Do not converse disruptively. Treat all staff and students in a courteous and professional manner. Do not harass or be disruptive to the common morale. Do not vandalize or compromise course resources or technology. Do not foster a hostile or distracting environment. Violators are subject to similar sanctions as those for academic fraud.

Studies show that students who use electronic devices during lectures and even those students who sit near them do not learn or perform as well as students who take handwritten notes free of such distractions. Therefore, electronic devices are prohibited in lecture sessions except for accessibility accommodations or by special permission from the instructor. Laptops, tablets, and hybrid devices are allowed in lab sessions only for course work. Phones and wearable devices must be silenced.

**University Policies**

Under the Family Educational Rights and Privacy Act of 1974, students have the right to privacy of their academic information. Without a waiver on file with the instructor or the registrar, no such information can be released to parents or third parties.

To receive accessibility accommodations from the instructor, the Office of Accessibility Services must officially authorize and notify the instructor of them, and you must allow 7 days of notice for the instructor to implement them.

West Virginia University and the instructor are committed to social justice and intend to foster a quality learning environment based upon open communication, mutual respect, and non-discrimination. Discrimination on the basis of race, color, ethnicity, nationality, sex, sexual orientation, gender, gender identity, age, disability, veteran status, or religion are prohibited.

**Academic Integrity Policy**

You must exemplify academic integrity in your work. The following acts of academic fraud violate this integrity:

- Working with another person without permission (there are no team assessments in this course).
- Enabling another person to access your work, with or without your knowledge or intent, or vice versa.
- Authoring or submitting work for another person, with or without compensation, or vice versa.
- Reusing work from another semester, course, or section without permission.
- Distributing your graded assessment to another person, or possessing a graded assessment from another person.
- Misrepresenting your identity, the authorship of your work, or your activities in the course.
- Plagiarism, which is using the work of another person without proper attribution.

If you commit an act of fraud, you are notified by email, the act is reported to the university by mandatory policy, and the instructor applies one or more of the following academic fraud sanctions based on the severity of the fraud:

- Your fraudulent work is assigned a grade of F (0 points).
- Your final grade for the course is reduced by up to 1 letter (up to 100 points).
- You are immediately assigned a final grade of F or unforgiveable F for the course.
- You are immediately and permanently expelled from the course.

The instructor may audit any work at any time to confirm its integrity. If you believe you or another person has committed an act of academic fraud, contact the instructor immediately.
